

The **Mobile Health (mHealth) for Mental Health Program** ([www.mh4mh.org](http://www.mh4mh.org)) at the University Of Washington in Seattle is seeking applicants for a full-time postdoctoral clinical psychology fellowship. The program is affiliated with UW's **Behavioral Research in Technology and Engineering (BRiTE) Center** within the Department of Psychiatry and Behavioral Sciences. Program director Dr. Dror Ben-Zeev <https://www.mh4mh.org/team> will serve as the primary mentor for this position.

The postdoctoral fellow will dedicate approximately half of their time (50%) to the development of an independent program of research within the area of mHealth for mental health. Specific activities may involve a combination of pilot studies, secondary data analysis, manuscript preparation, drafting and submitting new grant proposals, as well supporting and participating in ongoing mH4MH research activities. Projects include (but are not limited to) dissemination and implementation of mHealth in real-world clinical settings, therapeutic texting interventions, behavioral sensing projects, development of first-episode psychosis mHealth interventions for young people and their families, and technology-assisted advancement of evidence-based care and human rights awareness in West Africa.

Clinical responsibilities (50%) will involve serving as an mHealth practice facilitator interacting with clients with serious mental illness and frontline clinical staff at community mental health centers as part of a statewide mHealth implementation initiative. Client and clinician-facing activities will be supervised by a psychologist licensed in the State of Washington. Fellows will have opportunities to be involved in manuscripts and related projects that emerge from the primary implementation trial. Funding for this position is available for up to four years. A minimum two-year commitment is required.

The successful candidate is an early-career psychologist with interest in a career involving mHealth research in the assessment and treatment of serious mental illness. The fellow will be expected to demonstrate academic excellence and independence, organization and responsibility, creativity and ingenuity, as well as advanced skill in providing clinical care. Individuals with experience in research or clinical practice using digital interventions are strongly encouraged to apply.

Required qualifications:

- A Ph.D. at an accredited graduate program in clinical or health psychology
- Experience working with individuals with serious mental illness
- Familiarity with community mental health settings
- Strong interest in digital health

To apply, send the following application materials as a single PDF to BRiTE Center Coordinator Hailey at: [pvchu@uw.edu](mailto:pvchu@uw.edu)

- An updated CV
- 3 letters of reference from individuals that can speak to your responsibility, academic excellence, independence, and/or clinical skill
- A one-page statement describing the following:
  - o Your past experiences working with people with serious mental illness
  - o Your interest (and/or experiences) in digital health
  - o Your current research interests and career objectives
- (Optional) Up to 3 representative publications

For questions contact Dror Ben-Zeev at [dbenzeev@uw.edu](mailto:dbenzeev@uw.edu)
